FOR IMMEDIATE RELEASE

RESTORATIVE THERAPIES ANNOUNCES NEW CORPORATE BRANDING AND NEW WEBSITE THAT REFLECTS ITS COMMITMENT TO NEUROLOGICAL REHABILITATION AND CRITICAL CARE MARKETS

BALTIMORE, MD – September 4, 2019. Restorative Therapies, Inc., the leading developer manufacturer, marketer, and distributor of FDA cleared, class II medical devices for neurological rehabilitation and critical care early mobility announced today that it is launching new corporate branding and a new website. The new branding reflects the company's commitment to developing revolutionary integrated functional electrical stimulation (iFES)[™] technology to support positive therapeutic outcomes for patients in critical care, neurological rehabilitation and home settings.

"We are excited to share the new Restorative Therapies brand and reaffirm our commitment of providing the only iFES product line in this industry that covers the full continuum of care," said Jim Janicki, President & CEO of Restorative Therapies. "With a relentless focus on patient needs, we are proud to be a true partner and advocate to clinicians, patients and other healthcare providers who work every day to provide the best care possible."

The rebranding will be implemented across the company's products and services and has been kicked-off with our new website.

ABOUT RESTORATIVE THERAPIES:

Restorative Therapies is the industry leader in integrated functional electrical stimulation (iFES), successfully working with more than 100,000 patients, in more than 1,000 clinics, and 30 countries over the past 15 years. As the standard of care in rehabilitation therapy for many neurological conditions such as spinal cord injury, stroke, multiple sclerosis, cerebral palsy, transverse myelitis, or brain injury; the Restorative Therapies' products provide customized responsive therapeutic programs for ongoing rehabilitation and overall health benefits.

Restorative Therapies' iFES incorporates functional electrical stimulation integrated with task specific, or motor assistance/resistance, activities to optimize therapeutic goals. Our proprietary software provides real-time biofeedback, data tracking and sophisticated control algorithms that are designed for a wide range of neurological impairments. Restorative Therapies' products target multiple muscle groups for arm, core and leg rehabilitation with up to 12 coordinated channels of stimulation intended to reduce muscle atrophy, reduce muscle spasms, improve local circulation, maintain or increase range of motion and muscle re-education. This therapy has been shown to improve muscle weakness by rebuilding muscles to regain, or maintain, functionality as well as reduce common secondary complications such as pressure sores, urinary tract infections, pneumonia, cardiovascular disease or bone density.

Restorative Therapies' provides products and services across the full continuum of care, and site of care, from the critical care unit to inpatient and outpatient therapy and then in-home care. As **Your Advocate for Life**, Restorative Therapies is dedicated to helping all of our patients and clinicians achieve access to care and for patients to have the best opportunity to live an active healthy life.
